## Dept. of Artificial Intelligence & Machine Learning

Academic Year: 2022-2023	Semester: 6 <sup>th</sup>
Course Name: JAVA for Mobile Applications	Course Code: 18AI63
Total Contact hours: 50	Credits: 04
SEE Marks: 60; CIE: 40	Total Marks: 100
Course Plan Author: Prof. Manzoor Ahmed	Date: 20-03-2023

**Course Prerequisites:** Basic knowledge of Java fundamentals.

### Course Objectives:

1. To have an insight into enumerations and collection frameworks for storing and processing data.
2. To understand the architecture and components of android application.
3. To design interactive user interface.
4. To work with SQLite database.

### Course Outcomes:

1. Interpret the need for advanced Java concepts like enumerations and collections in developing modular and efficient programs.
2. Understand various application components in android.
3. Design efficient user interface using different layouts.
4. Develop application with persistent data storage using SQLite.

CO Number	Course Outcome	Blooms' Level
	At the end of the course, student should be able to . . .	
CO1	Interpret the need for advanced Java concepts like enumerations, collections and strings in developing modular and efficient programs.	L3
CO2	Understand various application components in android.	L2
CO3	Design efficient user interface using different layouts.	L3
CO4	Develop application with persistent data storage using SQLite.	L3

### Program Outcomes and Program Specific Outcomes

PO, PSO	<p><i>1.Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals and an Engineering specialization to the solution of complex problems in Computer Science and Engineering.</i></p> <p><i>2.Problem Analysis: Identify, formulate, review research literature and analyze complex Computer Science Engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.</i></p> <p><i>3.Design / Development of Solutions: Design solutions for complex Computer Science Engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety and the cultural, societal and environmental considerations.</i></p> <p><i>4.Conduct Investigations of Complex Problems: Use research based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions related to Computer Science Engineering.</i></p> <p><i>5.Modern Tool Usage: Ability to create, select, and apply appropriate techniques, resources and modern engineering and IT tools including prediction, modeling and analysis to complex Computer Science Engineering activities with an understanding of the limitations.</i></p> <p><i>6. The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.</i></p> <p><i>7. Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts and demonstrate the knowledge of and need for sustainable development.</i></p> <p><i>8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.</i></p> <p><i>9. Individual and Teamwork: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings.</i></p> <p><i>10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.</i></p>

## Dept. of Artificial Intelligence & Machine Learning

11. *Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.*

12. *Life-long Learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.*

*PSO1: Graduates will have the ability to adapt, contribute and innovate ideas in the field of Artificial Intelligence and Machine Learning.*

*PSO2: To provide a concrete foundation and enrich their abilities to qualify for Employment, Higher studies and Research in various domains of Artificial Intelligence and Machine Learning such as Data Science, Computer Vision, Natural Language Processing with Ethical Values.*

*PSO3: Graduates will acquire the practical proficiency with niche technologies and open- source platforms and to become Entrepreneur in the domain Artificial Intelligence and Machine Learning.*
