b. Assignment – 3	
F. EXAM PREPARATION	
1. University Model Question Paper	
2. SEE Important Questions	
G. Content to Course Outcomes	
1. TLPA Parameters	
2. Concepts and Outcomes:	21

Note : Remove "Table of Content" before including in CP Book

Each Course Plan shall be printed and made into a book with cover page Blooms Level in all sections match with A.2, only if you plan to teach / learn at higher levels

# COURSE PLAN - CAY 2019-20 15CV71 : Municipal and Industrial waste water Engineering

# A. COURSE INFORMATION

### 1. Course Overview

Degree:	Civil Engineering	Program:	B.E
Year / Semester :	2019/VII	Academic Year:	2018-19
Course Title:	Municipal and Industrial Waste Water Engineering	Course Code:	15CV71
Credit / L-T-P:	04	SEE Duration:	180 Minutes
Total Contact Hours:	50	SEE Marks:	80 Marks
CIA Marks:	20 Marks	Assignment	1 / Module
Course Plan Author:	PRIYANKASHRI K N	Sign	Dt:
Checked By:	SHIVAPRASAD D G	Sign	Dt:
CO Targets	CIA Target : 80 %	SEE Target:	79 %

#### 2. Course Content

Mod	Module Content	Teaching	Module	Blooms
ule		Hours	Concepts	Level
1	Introduction, need for sanitation, methods of sewage disposal, types of sewerage systems, dry weather flow, wet weather flow, factors effecting dry and wet weather flow on design of sewerage system, estimation of storm flow, time of concentration flow, material of sewers, shape of sewers, laying and testing of sewers, ventilation of sewers. low-cost waste treatment; oxidation pond, septic tank, Sewer appurtenances, manholes, catch basins, basic principles of house drainage, typical layout plan showing house drainage connections	10	Design of sewerage systems . sewer appurtenance s	L5
2	Design of sewers, hydraulic formula for velocity, effects of variation on velocity, regime velocity, design of hydraulic elements for circular sewers for full flow and partial flow conditions, disposal of effluents by dilution, self purification phenomenon, oxygen sag curve, zones of purification, sewage farming, sewage sickness, numerical problems on disposal of effluents, Streeter-Phelps equation		Design of different unit operations	L3
3	Waste water characteristics, sampling, significance and techniques, physical, chemical and biological characteristics, flow diagram for municipal waste water treatment, unit operations; screens, grit chambers, skimming tanks, equalization tanks Suspended growth and fixed film bio process, design of trickling filters, activated sludge process, sequential batch reactors, moving bed bio reactors, sludge digesters		Waste water characteristics	-
	Difference between domestic and industrial waste water, effect of effluent discharge on streams, methods of industrial waste water treatment; volume reduction, strength reduction, neutralization, equalisation and proportioning. Removal of organic, inorganic and colloidal solids, combined treatment methods;merits, demerits and feasibility, principles of discharge of raw, partially treated and completely treated wastes in to streams		conventional and biological treatment process	L2
5	Process flow chart, sources and characteristics of industrial waste water, treatment methods, reuse and recovery and disposal; cotton and textile industry, tanning industry, cane sugar and distilleries, dairy industry, steel and cement industry, paper and pulp industry, pharmaceutical and food processing industry		Industrial effluent treatment process	L3

#### 3. Course Material

Mod	Details	Available
ule		
1	Text books	
	K. Subramanya, "Engineering Hydrology".Metcalf and Eddy, "Wastewater Engineering - Collection, Treatment, Disposal and Reuse", McGraw Hill Pub.Co., 2009.	In Lib
b)	Jayarami Reddy, "A Text Book of Hydrology".Nelson Leonard Nemerow, "Industrial Waste Treatment", Butterworth-Heinemann, 2007	
2	Reference books	
	H.M. Raghunath, "Hydrology"Manual on Waste Water Treatment : CPHEEO, Ministry of Urban Development, New Delhi	In dept
b)	Sharma R.K., "Irrigation Engineering and Hydraulics".Fair, Geyer and Okun , "Water and Wastewater Engineering" Vol-II, John Willey Publishers, New York	
3	Others (Web, Video, Simulation, Notes etc.)	Not Available

1	Students are able to find the properties of water by exploration of soil for construction of structures	CO1	L3
b	Course Schedule	-	-
lass No	Module Content Covered	СО	Level
1	Introduction,Objectives and Importance	C01	L2
2	Stages and Methods of exploration- Test pits, Borings, Geophysical methods	C01	L2
3	stabilization of boreholes	C01	L2
4	Sampling techniques	C01	L2
5	Undisturbed, disturbed and representative samples	C01	L2
6	Geophysical exploration and Bore hole log	C01	L2
7	Drainage methods	C01	L2
8	Dewatering methods	C01	L2
9	estimation of depth of GWT (Hvorslev's method).	C01	L3
10	estimation of depth of GWT (Hvorslev's method).	C01	 L3
C	Application Areas	CO	Level
1	Use to find soil properties	CO1	L2
2	Used to determine the depth of ground water table	CO1	 L3
-			
d	Review Questions	-	-
1	List and explain various types of samplers	CO1	L2
2	Explain seismic refraction method of soil exploration with neat sketch	CO1	L2
3	What are the objectives of subsurface exploration?	CO1	L2
4	Describe with neat sketch wash boring technique to explore the soil?	CO1	L2
5	Explain with neat sketch electrical resistivity method of soil exploration?	CO1	L2
6	List out the methods of dewatering. Explain any two method of dewatering with neat sketch	CO1	L2
7	Indicate with neat sketches, selection of number and depth of boring for various civil engineering projects?	CO1	L2
8	List the methods used for controlling ground water during excavation and explain the electro — osmosis method.	CO1	L2
9	Estimate the ground water level by Hvorslev's method using the data given. Depth up to which water is bailed out is 30m, rise in water level after first day is 2.2m, second day 1.8m and on third day it is 1.5m.	CO1	L3
10	A sampling tube has inner diameter of 70mm and cutting edge of 68mm. its outside diameters are 72 mm and 74mm respectively. Determine area ratio, inside clearance, outside clearance of the sampler. This tube is pushed at the bottom of the borehole to a distance of 580mm with length of sample recorded being 520mm. find the recovery ratio.		L3

Module – 2	$\mathbb{N}$	lod	lu	le	_	2
------------	--------------	-----	----	----	---	---

Title:	Divide and Conquer	Appr Time:	10 Hrs
a -	Course Outcomes The student should be able to:	-	Blooms Level
1	Students are able to analyse the distribution of stress in water under loading	CO3	L4
2	Students are able to analyse the settlement of foundation under loading in cohesive and cohesion-less soil	CO4	L3
b	Course Schedule	-	-
Class No	Module Content Covered	СО	Level
17	Stress in soil Introduction	CO2	L2
18	Boussinesq's and Westergaard's theory - concentrated load, circular load	CO2	L2
19	rectangular load, equivalent point load method	CO2	L2
20	pressure distribution diagrams and contact pressure	CO2	L3
21	Newmark's chart.	CO3	L2
22	Foundation Settlement	CO3	L2
23	Approximate method for stress distribution on a horizontal plane	CO3	L3
24	Types of settlements and importance	CO3	L2
25	Computation of immediate and consolidation settlement	CO3	L4
26	Computation of immediate and consolidation settlement	CO3	L4
С	Application Areas	со	Level
1	Ability to draw stress disribution digram for a given load on soil	CO2	L3
2	Ability measure settlement beneath loaded footings on sand and clayey soil	CO3	L4
d	Review Questions	-	-
11	Explain with sketches various types of settlements. Comment on the sustainability of these types of settlements and functional utility of the structure	CO2	L2
12	List the components of settlement. Give expressions to calculate each one of them, clearly specifying what the notations stand for.	CO2	L2
13	Explain the basis of construction of New mark's chart and discuss how it is used.	CO2	L2
14	Define isobar. Construct an isobar for a vertical stress of 40kN/m2 when ground surface is subjected to a concentrated load of 1000kN.	CO2	L1,L3
15	A circular area on the ground surface 6m in diameter carries a uniformly distributed load of 150kN/m2 . Calculate the vertical stress at depths of 3m, 6m, 9m and 12m. Also plot the variation of stress with depth.	CO2	L3
16	Derive an expression for vertical pressure under a uniformly loaded circular area along vertical symmetrical axis.	CO2	L2
17	Explain a 2V:1H approximate method to determine stress at a depth Z below the footing of rectangular shape of size B x L.	CO2	L2
18	A structure is supported by ring foundation of outer inner diameters 8m and 5m respectively. If the foundation transmits contact pressure of 200kN/m2, compute the stress 3m below the center of the foundation.	CO3	L3
19	A footing of rectangular shape 6m x 8m is uniformly loaded with 180kN/m2 at the ground level. Newmark's chart of influence factor 0.004 is used to find the stress at a certain depth. It that found that 24 elements of the chart are covered by the loaded area. Determine the stress.	CO3	L3
20	A soft clay layer is 5m thick and lies under newly constructed building. The effective pressure due to overlying strata is 300kN/m and new construction increased the overburden by 120kN/m.If liquid limit is 80%, natural water content of the clay layer is 43% and G=2.70. Dry density of the clay is 18kN/m3.Compute the settlement.	CO3	L3,L4

## F. EXAM PREPARATION

### 1. University Model Question Paper

Cou	rse:	Municipal a	and Industrial v	wastewate	er Engineering		Month J	/ Year	May /2019	
Crs	Code:	15CV71	Sem:	7	7rks:	100	Time:		180 mi	inutes
-	Note	Answer all	FIVE full ques	tions. All c	questions carry eq	ual marks		Marks	CO	Level
1	a	Discuss ab	out the impor	tance of s	sub — soil explora	tion progra	am.	04	CO1	L2
	b	Explain the	method of se	ismic refra	action.			06	CO1	L2
	С	What are th	ne methods av	/ailable fo	r dewatering? Exp	olain any o	ne method.	06	CO1	L2
-	a	Explain the	plain the wash boring method, with the help of a neat sketch.							L2
	b	stablish the location of ground water in a clayey strata, water in bore was						6 08	CO1	L3
		bailed out								
					4.0cm , h2 = 57.9cr	-	-			
2	a	Derive the	expressions	for vertic	cal stress and s	hear stres	s by using	06	C02	L2
		Boussinesc	q's theory. Also	o compare	e this theory with \	Westergaa	rd's theory.			
	b	Write a not	rite a note on pressure distribution diagrams.							L2
	С	A load of	1000KN acts	as a poir	nt load at the su	irface of a	a soil mass	. 06	C02	L3
		Estimate th	ne stress at a	point 3m	below and 4m av	way from	the point of	f		

		COURSE PLAN - CAY 2019-20 action of the load of Boussinesg's formula. Compare the value with the		-Pn5b1-F	
		result from Westergaard's theory.			
		OR			
-	a	Explain with sketches various types of settlements. Comment on the sustainability of these types of settlements and functional utility of the structure.	08	CO3	L2
	b	A soft clay layer is 5m thick and lies under newly constructed building. The effective pressure due to overlying strata is 300kN/m <sup>2</sup> and new construction increased the overburden by 120kN/m <sup>2</sup> . If liquid limit is 80%, natural water content of the clay layer is 43% and G=2.70. Dry density of the clay is 18kN/m <sup>3</sup> . Compute the settlement.	08	CO3	L3
3	а	Define At rest, Active and Passive Earth pressures.	04	CO4	L2
	b	Explain Rankine's theory for calculating Active pressure in cohesion less soils for no surcharge.	05	CO4	L2
	С	With neat sketch, explain Rebhann's graphical method of finding active earth pressure on a retaining wall	07	CO4	L4
-	а	Explain the causes for a slope failure and list the types of slope failures.	05	CO5	L2
	b	Explain Swedish method of slices of stability analysis of slopes.	05	CO5	L2
	С	c. A 5m deep canal has side slopes of 1:1. The properties of soil are Cu = 20kN/m2, $\mathcal{O}$ = 10°, e = 0.8 and G = 2.8. If Taylor's stability number is 0.108, determine the factor of safety with respect to cohesion when the canal runs full. Also fmd the factor of safety in case of sudden draw down, if the Taylor's stability number for this condition is 0.137.	06	CO5	L4
4	а	Define : i) Ultimate bearing capacity ii) Safe bearing capacity.	04	CO6	L2
	b	Discuss effect of water table on bearing capacity of soil.	06	CO6	L2
	С	A square footing placed at a depth of 1m is required to carry a load of 1000kN. Find the required size of footing given the following data : C = 10kN/m2, $\mathcal{A} = 38^{\circ}$ , y = 19kN/m3. For $\mathcal{A} = 38^{\circ}$ . Terzaghi's bearing capacity factors are N <sub>c</sub> = 61.35, N2 = 48.93, N <sub>y</sub> = 74.03. Assume water table is at base of footing.	06	CO6	L4
-	а	Discuss the proportioning of combined footings.	04	CO6	L5
	b	Explain the following : i) Corrections to SPT 'N' value. ii) Use of plate load test results to calculate bearing capacity of soils.	06	CO6	L2
	С	A circular footing rests on a pure clay with qu = 270 kN/m <sup>2</sup> at a depth of 1.8m. Determine the diameter of the footing if it has to transmit a load of 720 kN. Assume the bulk unit weight of soil as 181(N/m3 and the factor of safety as 3.	06	CO6	L4
5	а	Mention the situations where pile foundation is necessary and explain the classification of piles.	08	CO7	L2
	b	Design a friction pile group to carry a load of 3000 kn including the weight of the pile cap at a site where the soil is uniform clay to a depth of 20m, underlain by rock. Average unconfined compressive strength of the clay is 70 kN/m2. The clay may be assumed to be of normal sensitivity and normally loaded with liquid limit 60%. A factor of safety of 3 is required against shear failure.	08	CO7	L4
-	а	Explain determination of the pile load capacity in detail.	05	CO7	L2
	b	Explain the factors influencing the selection of depth of foundation.	05	CO7	L2
	С	A group of nine piles with three piles in a row was driven into soft clay extending from ground level to a great depth. The diameter and length s of the piles were 30cm and 10m respectively. The cohesion C = 35kN/m2. If the piles were spaced at 90cm c/c, compare the bearing load on the pile group on the basis of shear failure criterion for a factor of safety of 2.5. Neglect bearing at the tip of the piles. Take m=0.6 for shear mobilization around each pile.	06	CO7	L4

		Estimate the stress at a point 3m below and 4m away from the point of			
		action of the load of Boussinesq's formula. Compare the value with the			
		result from Westergaard's theory			
	4	Write a note on settlement of footings.	08	CO3	201
	5	A saturated clay 8m thick underlies a proposed new building. The existing	08	CO3	201
		overburden pressure at the centre of clay layer is 300KPa and load due to			
		a new building increase the pressure by 200KPa. The liquid limit of the			
		soil is 75%. Water content of soil is 50%. GS — 2.7. Estimate consolidation			
		settlement.			
	6	Discuss the proportion of isolated footing.	06	CO3	2016
	7	Explain construction and uses of Newmarks chart.	06	CO2	2016
3	1	Define At rest, Active and Passive Earth pressures.	06	CO4	201
•	2	Explain Rankine's theory for calculating Active pressure in cohesion less	06	CO4	201
		soils for no surcharge.		•	
	3	A soft clay layer is 5m thick and lies under newly constructed building.	08	CO4	2016
		The effective pressure due to overlying strata is 300kN/m and new		•	
		construction increased the overburden by 120kN/m.lf liquid limit is 80%,			
		natural water content of the clay layer is 43% and G=2.70. Dry density of			
		the clay is 18kN/m3.Compute the settlement.			
	4	What are the causes for failure of slopes?	06	CO5	2016
	5	Discuss the Swedish method of slices for a cohesive frictional soil.	08	CO5	201
	6	An embankment is inclines at an angle of 35° and its height is 15m. the	06	CO5	2017
		angle of shearing resistance is 15° and the cohesion intercept is			
		200KN/m2 . The unit weight of soil is 18.0KN/m3. If Taylor's stability			
		number is 0.06, find the factor of safety with respect to cohesion.			
4	1	Define safe bearing capacity, safe bearing pressure and allowable bearing	06	CO6	201
		pressure.			
	2	Write a note on standard penetration test and its corrections.	08	CO6	201
_	3	Calculate the ultimate bearing capacity of a 2m wide square footing	06	CO6	201
		resting on the ground surface of a sand deposit with the following			
		properties :			
		i) Unit weight 18.6 KN/m3			
		ii) Angle of internal friction 35°. Also calculate UBC of same footing when it			
		is placed at depth of Im below the ground surface. Take Nq = 41.4 ,			
		N, = 42.2.			
	4	Discuss effect of water table on bearing capacity of soil.	06	CO6	2016
	5	A square footing placed at a depth of 1m is required to carry a load of	08	CO6	201

		COURSE PLAN - CAY 2019-20			
		1000kN. Find the required size of footing given the following data :			
		C = 10kN/m2 , $\emptyset$ = 38° , y = 19kN/m3. For $\emptyset$ = 38°. Terzaghi's			
		bearing capacity factors are N_c = 61.35 , N2 = 48.93 , N_y = 74.03. Assume			
		water table is at base of footing.			
	6	A circular footing rests on a pure clay with $qu = 270 \text{ kN/m}^2$ at a depth of	08	CO6	2017
		1.8m. Determine the diameter of the footing if it has to transmit a load of			
		720 kN. Assume the bulk unit weight of soil as 181(N/m3 and the factor of			
		safety as 3.			
5	1	Explain the factors affecting the choice of foundation.	06	CO7	2015
	2	Write a note on classification of pile foundations.	08	CO7	2015
	3	Explain negative skin friction in pile foundation	06	CO7	206
	4	Explain determination of the pile load capacity in detail.	06	CO7	2016
	5	Design a friction pile group to carry a load of 3000 kn including the	08	CO7	2017
		weight of the pile cap at a site where the soil is uniform clay to a depth of			
		20m, underlain by rock. Average unconfined compressive strength of the			
		clay is 70 kN/m2. The clay may be assumed to be of normal sensitivity			
		and normally loaded with liquid limit 60%. A factor of safety of 3 is			
		required against shear failure.			
	6	A group of nine piles with three piles in a row was driven into soft clay	06	CO7	2017
		extending from ground level to a great depth. The diameter and length s			
		of the piles were 30cm and 10m respectively. The cohesion C = $35$ kN/m2.			
		If the piles were spaced at 90cm c/c, compare the bearing load on the			
		pile group on the basis of shear failure criterion for a factor of safety of 2.5.			
		Neglect bearing at the tip of the piles. Take m=0.6 for shear mobilization			
		around each pile.

COURSE	PLAN -	CAY	2019-20

	COURSE PL	AN - CAY 2	2019-20		1	1	,
	problems on disposal of effluents, Streeter- Phelps equation				Streeter- Phelps equation		
	Waste water characteristics, sampling, significance and techniques, physical, chemical and biological characteristics, flow diagram for municipal waste water treatment, unit operations;	5	- L1 - L3	L3	characte ristics -	- Lecture -	- Slip Test -
3	screens, grit chambers, skimming tanks, equalization tanks Suspended growth and fixed film bio process, design of trickling filters, activated sludge process, sequential batch reactors, moving bed bio reactors, sludge digesters		- L3 - L2	L3	- design of trickling filters -sludge digester s	- Lecture - Tutorial -	- Assignment - -
	Difference between domestic and industrial waste water, effect of effluent discharge on streams, methods of industrial waste water treatment; volume reduction, strength reduction,		- L3 - L1	L3	-sewage disposal -	- Lecture - Tutorial -	- Assignment - -
4	neutralization, equalisation and proportioning. Removal of organic, inorganic and colloidal solids, combined treatment methods;merits, demerits and feasibility, principles of discharge of raw, partially treated and completely treated wastes in to streams		- L2 - L4	L4	-sewage discharg e -waste water treatmen t methods	- Lecture - Tutorial -	- Assignment - -
	Process flow chart, sources and characteristics of industrial waste water, treatment methods, reuse and recovery and disposal;	-	- L2 - L2	L2	- reuse and recovery and disposal -	- Lecture - -	- Assignment - -
5	cotton and textile industry, tanning industry, cane sugar and distilleries, dairy industry, steel and cement industry, paper and pulp industry, pharmaceutical and food processing industry		- L2 - L2	L2	- paper and pulp industry - pharmac eutical and food processi ng industry	- Lecture - -	- Assignment - -

			CC			7-CV-SKIT-Ph5b1-F02-V2.2
			sewer appurtenanc es	DURSE PLAN - CAY 2019-7 Design of sewerage systems . sewer appurtenances		Student should be able understand Drainage connection
	biological			Design of different unit operations	- admixtures -understand sewerage network	Student should be able to understand sewerage network
	design different	sewage	Waste water characteristi cs	Waste water characteristics		Student should be able to understand conventional and biological treatment process
2	manage sewage effluent issue	should be able identify		conventional and biological treatment process	- Understand - treatment unit operation -	Student should be able design different treatment unit operation
	Student should be able identify waste streams	design sewer		Industrial effluent treatment process	- Understand - sewage effluent 	Student should be able to manage sewage effluent issue
		industrial waste water	identify waste streams	water characteristics	- Apply strength of concrete - identify waste streams -	Student should be able identify waste streams
	industrial waste water treatment plant		characteristic swater characteristic s	qualities and properties of waste water	- Apply - water characteristics	Student should be able to design sewer with the help of flow of water characteristics
	and properties of waste water	understan d type of		water characteristics	- Understand - waste water treatment	Student should be able to design the industrial waste water treatment plant
	able to understand type of treatment for disposal,	Sewage disposal,		properties of waste water		Student able to understand the qualities and properties of waste water
	properties of	understan d type of	Special	Sewage disposal,	- Understand - recycle and reuse	Student should be able to understand type of treatment for disposal,
