### 2. Course Content

Content / Syllabus of the course as prescribed by University or designed by institute.

Module	Content	Teaching Hours	Blooms Learning Levels
1	<b>Discrete Fourier Transforms:</b> Definitions, properties-linearity, shift, symmetry Properties- circular convolution – periodic convolution, use of tabular arrays, circular arrays, Stock ham's method, linear convolution – two finite duration sequence, one finite & one infinite duration, overlap add and save methods	10	L2
2	<b>Fast Fourier Transforms Algorithms:</b> Introduction, decimation in time algorithm, first decomposition, number of computations, continuation of decomposition, number of multiplications, computational efficiency, decimation in frequency algorithms, Inverse radix – 2 algorithms.	10	L2
3	<b>Design of IIR Digital Filters:</b> Introduction, impulse invariant transformation, bilinear transformations, All pole analog filters- Butterworth & Chebyshev filters, design of digital Butterworth filter by impulse invariant transformation and bilinear transformation, Frequency transformations.	10	L5
4	<b>Design of IIR Digital Filters (Continued):</b> Design of digital Chebyshev –type 1 filter by impulse invariant transformation and bilinear transformation, Frequency transformations. <b>Realization of IIR digital systems:</b> direct form, cascade form and parallel form, Ladder structures for equal degree polynomial.	10	L5
5	<b>Design of FIR Digital Filters:</b> Introduction, windowing, rectangular, modified rectangular. Hamming, Hanning, Blackman window, design of FIR digital filters by use of windows, Design of FIR digital filters-frequency sampling techniques. <b>Realization of FIR systems:</b> direct form, cascade form, linear phase form	10	L5
-	<b>Total</b>		

### 3. Course Material

Books & other material as recommended by university (A, B) and additional resources used by course teacher (C).

1. Understanding: Concept simulation / video ; one per concept ; to understand the concepts ; 15 – 30 minutes
2. Design: Simulation and design tools used – software tools used ; Free / open source
3. Research: Recent developments on the concepts – publications in journals, conferences etc.

<b>E</b>	<b>Recent Developments for Research</b>	-	-
	The breakthroughs in DSP include various advances and extensions from old techniques to new techniques. For example, signal processing techniques have moved from single-rate to multirate processing, from time-invariant to adaptive processing, from frequency-domain (the traditional Fourier transform, as we know it) to time-frequency analysis, and from linear to non-linear signal processing. Recent developments in these areas have not only renovated the theory of digital signal processing, they have also resulted in new tools that find applications in various domains. For instance, multirate signal processing has triggered recent advances in modem technology and speech/audio coding; adaptive filtering has made echo cancellation and noise suppression possible; time-frequency analysis has found its way into various applications in radar and medical signal processing; and non-linear processing has made engineers rethink various problems in speech recognition and image analysis

#### 4. Course Prerequisites

Refer to GL01. If prerequisites are not taught earlier, GAP in curriculum needs to be addressed. Include in Remarks and implement in B.5.

Students must have learnt the following Courses / Topics with described Content . . .

Mod ules	Course Code	Course Name	Topic / Description	Sem	Remarks	Blooms Level
1	15EC44	Signals & Sytems	Module1 Elementary signals, operations on signals	4		L1,L2
2	15EC44	Signals & Sytems	Module2 TD representation of LTI s/m	4		L1,L2
3	15EC44	Signals & Sytems	Module4 Fourier Transforms	4		L1,L2

#### 5. Content for Placement, Profession, HE and GATE

The content is not included in this course, but required to meet industry & profession requirements and help students for Placement, GATE, Higher Education, Entrepreneurship, etc. Identifying Area / Content requires experts consultation in the area.

Topics included are like, a. Advanced Topics, b. Recent Developments, c. Certificate Courses, d. Course Projects, e. New Software Tools, f. GATE Topics, g. NPTEL Videos, h. Swayam videos etc.

Mod ules	Topic / Description	Area	Remarks	Blooms Level
1	DFT	Digital System	Required for Higher Education, Entrepreneurship	L2
2	FFT	Real Time	Industry & profession requirements	L3
3	FFT	Real Time	Industry & profession requirements	L3
4	FIR Filter	Communication	Industry & profession requirements	L2
5	IIR filter	Communication	Industry & profession requirements	L3

39	Describe the frequency sampling realization of FIR filter.	10	CO5	L5
40	Determine the filter coefficients of an FIR filter for the desired frequency response $H_d(\omega) = e^{-j2\omega}$ $ \omega  < \pi/4$ , $H_d(\omega) = 0$ otherwise Use rectangular window function. Find the frequency response $H(\omega)$ of the filter.	10	CO5	L5
41	Determine the filter coefficients of an FIR filter for the desired frequency response $H_d(\omega) = e^{-j2\omega}$ $ \omega  < \pi/4$ , $H_d(\omega) = 0$ otherwise Use Barlet window function. Find the frequency response $H(\omega)$ of the filter.	10	CO5	L5
42	Determine the filter coefficients of an FIR filter for the desired frequency response $H_d(\omega) = e^{-j2\omega}$ $ \omega  < \pi/4$ , $H_d(\omega) = 0$ otherwise Use Blackman window function. Find the frequency response $H(\omega)$ of the filter.	10	CO5	L5
43	Determine the filter coefficients of an FIR filter for the desired frequency response $H_d(\omega) = e^{-j2\omega}$ $ \omega  < \pi/4$ , $H_d(\omega) = 0$ otherwise Use Hamming window function. Find the frequency response $H(\omega)$ of the filter.	10	CO5	L5
44	Determine the filter coefficients of an FIR filter for the desired frequency response $H_d(\omega) = e^{-j2\omega}$ $ \omega  < \pi/4$ , $H_d(\omega) = 0$ otherwise Use Hanning window function. Find the frequency response $H(\omega)$ of the filter.	10	CO5	L5
45	Determine the filter coefficients of an FIR filter for the desired frequency response $H_d(\omega) = e^{-j2\omega}$ $ \omega  < \pi/4$ , $H_d(\omega) = 0$ otherwise Use Kaiser window function. Find the frequency response $H(\omega)$ of the filter.	10	CO5	L5
46	Write the Rectangular window sequence and plot its magnitude and phase response	5	CO5	L5

## Course Outcome Computation

Academic Year:

Odd / Even semester

INTERNAL TEST		T1						T2					
Course Outcome	CO1	CO2		CO3		CO4		CO5		CO6			
QUESTION NO	Q1	LV	Q2	LV	Q3	LV	Q1	LV	Q2	LV	Q3	LV	
MAX MARKS	10	-	10	-	10	-	10	-	10	-	10	-
